

(discussion community) is essential and useful. Since a lot of developers ask help in the platform, the answer to the question may mislead our solutions, especially the security problem, since the developers can debug the code but can not check the whether the code is security or not. The quality of the answer could direct the quality of the project.

**Weakness:** Focus on StackOverflow may have many limitations, in other words, the dataset is limited to English posts and users who could access to the platform. For example, people in China can't access to StackOverflow, China has a large number of software developers ~~who~~ <sup>be</sup> may or may not proficient in security code implementation. ~~the dataset didn't cover these part of code/date.~~ <sup>It does not</sup> the findings shown in this paper may not be representative.

**Analysis:** According to the article, I think it's important to build the tools to detect the security issues during implementation and fixed the misuse for developers automatically.

After writing the critique, please use MS Word to check for grammar errors.
